Ac Suspiciousfilescanner: how it is put together

sketched from the files

Ac Suspiciousfilescanner: the run, step by step

If a step fails, the honest run says so and stops.

traced, not guessed, GK

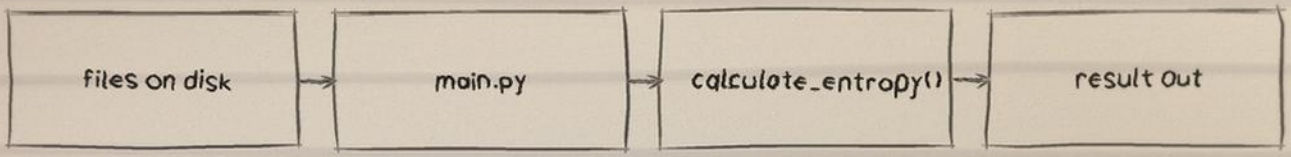

Product map: what Ac Suspiciousfilescanner is for

WHAT IT IS	WHAT GOES IN
A small project in Python, Markdown, Text. The README and the files are the whole claim.	The files at the top of the tree: main.py, README.md, requirements.txt.

WHAT COMES OUT	WHERE IT STOPS
What the top files produce when they run or get read. Nothing else is promised.	No service behind it, no account, no upload. If a path is untested, VISUAL.md says so.

mapped by hand, OK

AC Suspiciousfilescanner: data flow, in one direction

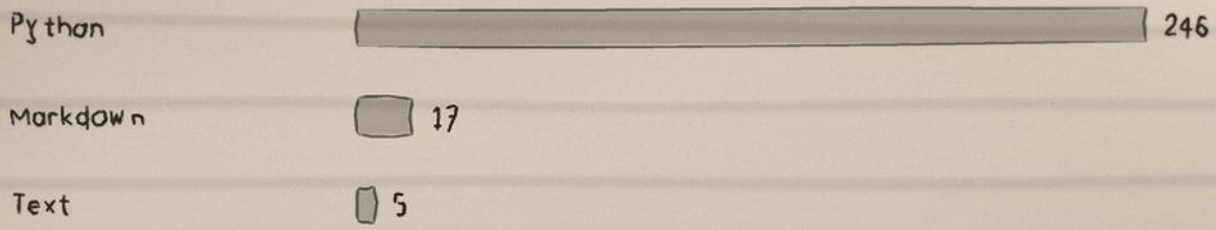

One direction. Anything the code does not do is not drawn.

second sheet, GK

Ac Suspiciousfilescanner in numbers, counted 2026-10-30

Counted from the local snapshot of this repo. Method for every number: VISUAL.md.

3 files in the tree.
4 commits, first 2025-06-20, last 2025-06-20, from the local git log.
No test files by name in this snapshot.

counted and drawn, CK

Ac Suspiciousfilescanner: schematic of the apparatus

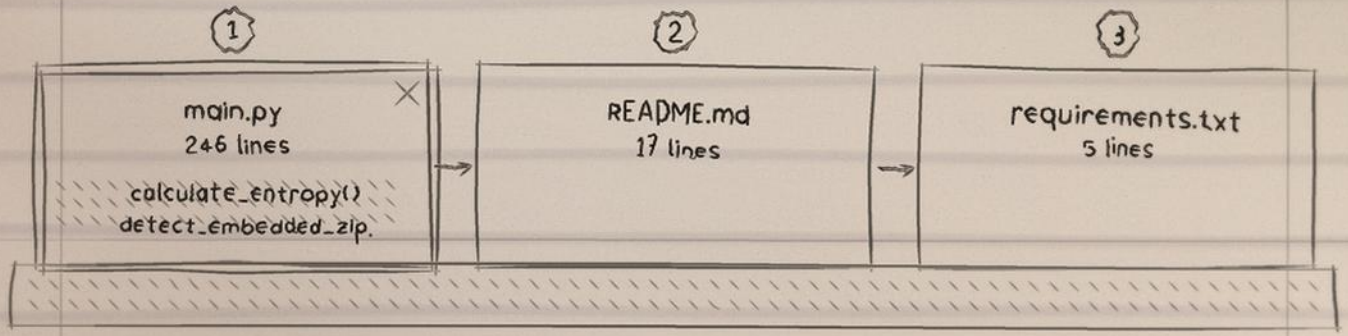

the system as a machine: parts, flow, and measurements

construction lines left in, as drawn

parts list

1. main.py
2. README.md
3. requirements.txt

in flow order, first to last

base plate: the repo itself, sectioned

span: 3 files, 268 lines counted

measured in the code: loop cap 256 (main.py)

turns of the crank so far: 4 commits, 2025-06-20 to 2025-06-20

measured and sketched, GK
